THE BEBI BOTTLE IN PET

The shape of our BEBI 300 ml bottle with BETA-R 40 neck is now also available in transparent PET material.

CARBON FREE

With conventional black colored plastic packaging materials, the material can not be clearly identified during the recycling process. As a result, black colored packaging ends up in the residual stream and can not be recycled.

To counteract this problem, we offer special masterbatches that allow the reflection of wavelengths in the recycling process. This means that our black-colored packaging remains recyclable and does not need to be burned to the detriment of the environment.

RECYCLED CLOSURES

Did you know? SHB closures can be made from up to 100% recycled post-consumer PP material. Household plastic packaging waste are collected, sorted, washed and shredded into flakes.
